Henderson’s “Forget-Me-Not” Collection of 17 Packets of Perennial Flower Seeds for $1.50 Sent Postpaid

The great charm of Perennials lies in their permanence. Once established they are a constant source of pleasure, and among the most interesting plants in our gardens, presenting a variety of form and color so great as to fit them for almost every conceivable purpose in the garden.

This collection consists of 17 of the most popular and easily grown sorts, all of which will bloom the year following the sowing of seed. A few, including Coreopsis, Gaillardia, etc., often flower the same year, if the seed is sown early in spring.

Perennial Flower Seeds can be sown from early spring to about August 1st, in the latitude of New York.

The letter prefixed to each variety is a key to the flower shown.

### Henderson's Invincible Asters

Henderson's Invincible are the highest achievement in China Asters, and a superior race in every way. The plants are of very healthy, robust, branching growth, about 2 feet high—though under best culture often 3 feet—producing, on long stems, massive Chrysanthemum-like flowers of perfect form and graceful outline, exceedingly double to the very center. When well grown the flowers of Henderson's Invincible Asters average 3¾ inches across; 4-inch flowers are quite common, and if grown especially for cut flowers, the side branches pruned, allowing a plant to carry not over 8 or 10 flowers, one flower to a stem, their size will then be enormous, measuring 4½ and 5 inches across. These magnificent blossoms, are unsurpassed as cut flowers for vases and home decoration.

### Imperial or “Daybreak” Asters

(Shown in colors on this page)

These Asters—made in America—are Mid-summer flowering varieties, vigorous, healthy and vigorous in growth, of upright habit and very profuse bloomers—veritable bouquets of flowers. The flowers—borne on long, stiff stems—are so very double as to appear almost like balls. The petals, short and narrow, are slightly folded and of durable lasting substance. While splendid as cut flowers, it is the bedding Aster for our American climate and conditions.

The plants are tall, strong growers, with long stems crowned with massive double flowers 5 inches across, composed of long, narrow straight petals folded inward twice, wide. These flowers are of great substance and last longer than any other Aster.

### Henderson's Giant Comet Asters

Also known as Astermums and Mammoth Ostrich Plume Asters

These truly grand Asters are a highly developed American type of the German Comet, or Mammoth Ostrich Plume Asters and are far superior to imported strains. The flowers are of immense size, 4 to 5 and often 6 inches across, composed of long wavy twisted petals, gracefully formed into loose, yet densely double, half globes, equaling some of the finer Ostrich Plume Chrysanthemums. The plants, of luxuriant branching growth, attain a height of 18 inches to 2 feet, each plant bearing from 20 to 30 of these magnificent flowers on very long stems, which gives them an added value for cutting and vasing.

A Great Advance on Old Varieties

**HENDERSON'S "Mount Vernon"**

Collection of Six Giant Snapdragons

The continuous-blooming qualities of the Snapdragons, their ease of culture and pure, bright colors, entitle them to a permanent place in all gardens. Although perennials in the South, they do splendidly when grown as annuals in the North; spring sown seed produces flowering plants by July, which continue to bloom in increasing profusion until frost. When planted in beds the plants should be placed 9 inches apart each way. When grown individually it is advisable to stake the plants on account of the weight of the large spikes of bloom. Height, 2 feet.

- **Canary Bird.** Pure soft canary yellow. (See color plate No. 5). Pkt. 25c.
- **Cerberus.** Rich carmine red. (See color plate No. 3). Pkt. 25c.

Henderson’s Selected Flower Seeds

AGERATUM or Floss Flower

Dwarf compact-growing annual plants, 6 to 12 inches high, flowering freely throughout the season from spring-sown seed. Splendid for bedding, edgings or pots. Ageratums produce flowers freely all through the summer. (See illustration.)

1052 Little Dorrit Blue .................. Pkt. 10c.
1034 Little Dorrit White .................. Pkt. 10c.

ALYSSUM, SWEET

1052 "Carpet of Snow." This new variety is pure white and grows only 2 to 3 inches high and flowers profusely; in fact, it is a perfect carpet of snow throughout the season. We have counted as many as 600 heads of pure white flowers open on one plant at one time. For edging and bedding this is a very satisfactory little annual. (See illustration.)

Per ½ oz., 30c.; Pt. 10c.

1054 Maritimum. The well-known Sweet Alyssum; white flowers borne profusely. ½ ft.
Per ½ oz., 25c.; Pkt. 10c.

ARCTOTIS GRANDIS

1173 The large, nearly white flowers are borne on long stems well above the foliage. The petals are white on the upper surface and pale blue on reverse and in the center of the flower is a light blue disc surrounded with white stamens and a narrow golden band. Seen in the bright sunlight a very charming effect is produced as the white petals contrast beautifully with the blue disc and the stamens. Very good for cutting. The plant is of branching habit and forms a clump 2 to 3 feet high. (See illustration.)

Pt. 10c.

BALSAM, DOUBLE

1490 Goliath Balsam. Mixed Colors. A new type of phenomenally robust growth, flowering up a main stem about 4 feet high, the lower half of which carries several candelabra-like side branches, all of which are well clothed with very large and double flowers of charming colors. (See illustration.)

BARTONIA, GOLDEN

1506 Bartonia Aurea. A native of California, and one of our showiest annuals. It produces large single golden-yellow flowers which have quite a metallic lustre when the sun shines on them. A large cluster of yellow-stamens adds to the effectiveness of the blooms, which measure nearly 3 inches across, and are borne profusely all summer long on bushy plant about 1 foot high. It will grow almost anywhere, but prefers a moist situation. (See illustration.)

Large-Flowering “King”

One of the showiest and most easily grown of garden annuals. These new large-flowering sorts are great improvements: the plants form perfect little bushes about 10 inches high by 1 foot across and are a perfect mass of bloom from early summer to late fall. (Celosia Chilids)

The plants, 2 to 3 ft. in height, branch freely, each branch terminating with a flower-head. It continues in flower from early summer until frost, and is very effective for gardens, either massed or grown as individuals. (See illustration.) Per 500 seeds, 20c.; Pkt. 10c.

CENTAUREA

Batchelor's Button, Ragged Sailor or Cornflower

Well-known and a great favorite with most flower lovers. The plants itself is not imposing, but the flowers charm everyone by their simplicity and beauty. Seed may be sown either in the spring or the fall of the year, and if larger flowers are wanted, the plants should be thinned out to a space about 8 inches square. (See illustration.)

1825 Cyanus Double Blue. A very old favorite garden annual, flowering freely in almost any situation, height 2 to 3 ft.; largely used for cut flowers. Per pkg. 10c.

1830 Cyanus, Double, Mixed Colors. Produces large globular heads of flowers filled up to the center with florets. Per 2 oz. 30c.; Pkt. 10c.

CENTAUREA IMPERIALIS or Imperial Sweet Sultan

These beautiful giant-flowering "Sultans" produce long-stemmed, exquisitely fringed blossoms three to four inches across, of graceful effect, and are delightfully fragrant. Very popular, some having centers of a different color, as violet with white center, etc. For bouquets and vases they are exceptionally beautiful. If cut when scarcely opened they will last for ten days in water. The plants flower freely in the garden the first summer from seed sown in the spring. Strong, bushy form, 2 to 3 feet high. 1851 Collection of the above 5 separate varieties. Pkt. 30c.

CLEOME ("Spider Flower")

1955 Gigantea Rosea. Cleome, or giant spider plant as it is sometimes called, has been neglected for years; probably because attention has not been directed to it by seedsmen. The feathery petals and long stamens give the flowers the appearance of an Orchid. Sow seed in May and when the seedlings are three or four inches high, thin out to stand two feet apart. The plants grow very rapidly and attain a height of from three to five feet. (See illustration.) Per 500 seeds, 10c.; Pkt. 10c.

CHRYSANTHEMUM, ANNUAL

These improved varieties form bushy, compact, oval plants about 18 inches high, are of easy cultivation, and flower most abundantly during the summer; very showy garden annuals and fine for cutting as the stems are stiff and long and they keep fresh for a long time in water. (See illustration.)

HENDERSON'S EVER BLOOMING ANNUAL HOLLYHOCKS
Every Garden May Now Be Glorified with Queenly Hollyhocks Grown as Easily and Flowering as Quickly from Seed as Any Garden Annual

The old favorite Hollyhock can seldom be flowered from seed before the second year, and as the young plants frequently winter-kill, it has limited the cultivation of Hollyhocks to those willing to give the young plants special winter care. All of this bother is obviated in growing our annual Hollyhocks, for they flower the first season from seed.

The plants from early-sown seed set out in May commence blooming in July, the May-sown in August, and in either event then flower profusely until frost.

There are maroon, black, pink, chamois-rose, apricot with garnet throat, crimson, canary-yellow, pink with claret throat and veins, blush with crimson lacings, cerise, white, scarlet, blush with white throat magenta, apricot with buff margin, wine-red with white edge, etc., etc. (See Illustration.)

2450 Henderson's Ever-Blooming Annual Hollyhocks. Grand Combination Mixture of doubles and semi-doubles, including all colors, shades and variations.

GIANT JAPANESE MORNING GLORY (Ipomoea imperialis)

The robust vines attain a height of from 30 to 50 feet. The foliage is luxuriant, distinct and varied, mostly green, but many leaves are mottled light and dark green, white and grey.

2355 Ruffled and Frilled. The perfection of Morning Glories. Immense flowers, often as big as saucers, all wavy, ruffled and frilled from throat to margin, like crumpled velvet. They are simply magnificent. (See Illustration.)

Mixed Colors ........................................................ Per oz., 50c.; Pkt. 10c.

THE NEW GIANT WHITE MOONFLOWER

2350 Ipomoea Grandiflora Maxima. This greatly improved variety of the popular Moonflower Vine produces much larger flowers and in greater profusion: if grown in a warm sunny location, and given sufficient water while making growth, the vine will attain a height of from 60 to 75 feet during the summer season. It will be covered with large bluish green heart-shaped leaves, and studded from July until frost with immense saucer-shaped flowers, glistening like white satin. They are also subtly fragrant. The flowers open about sunset and close the next morning, though on cloudy days they remain open until noon. Per 100 seeds, 90c.; Pkt. 10c.
KOCHEL TRICOPHYLLA
Mexican Fire Plant or Summer Cypress
2312 A popular annual, sometimes known as Belvilles, Mock Cypress, etc. It is easily grown from seed, forming oval bushes 2 to 2 1/2 feet high, densely clothed with small, feathery, light-green foliage; deepening in color as the summer advances until the whole plant assumes a terry crimson hue. The small numerous flowers, borne in the fall, are also of a bright red color. An attractive plant at all times, either in garden beds or in pots, placed at intervals in beds of white Sweet Alyssum, or among "Dusty Miller;" the effect is very fine. (See illustration.) Per 1,000 seeds. 25c; 1 lb. 10c.

LARKSPUR
Annual Henderson’s Tall Branching Convolvulus Candelabra II, Pkt.
Popular garden annuals. This splendid class grows 2 to 3 feet high and bears flowers on long stems, rendering them of exceptional value for cutting purposes. The spikes of flowers are of varied shades of red, blue, white, etc. They are of easy culture, thriving in almost any soil—but a sunny situation suits them best. They are of long-continued bloom, keeping up a bright display until cut down by frost. (See illustration.) Per 1,000 seeds. 25c; 1 lb. 10c.

Louise Henderson’s “Special” Collection of Seven Modern Gladiolus

This is a Grand Collection of moderate priced Gladiolus. All are of the modern large-flowering type, strong, healthy growing and free-bloom. Every variety comprising the set is a gem. The colored illustrations convey an idea of the wide range of exquisite coloring, but it does not do the flowers justice. They must be seen to be appreciated, and we hope a large number of our patrons will avail themselves of opportunity to glorify their gardens the coming summer with this collection. Our leaflet “Garden Culture of Gladiolus” sent with each collection.

**Sow the “Henderson” Lawn Grass Seed**

and Obtain a Grassy Carpet of Unrivalled Emerald Green

IN FOUR WEEKS FROM SOWING IT IS READY FOR MOWING

The “Henderson” lawn grass seed mixture has been thoroughly tested by country-wide use for more than half a century. It is the fruit of years of experience and close study of American conditions and is undoubtedly the best for the American climate. By its use a deep green, velvety sward, free from clumps, can be produced from four to six weeks’ time.

The “HENDERSON” LAWN GRASS SEED is a carefully arranged combination of fine-leaved, dwarf Grasses, which are at their best during different months of the year, thus keeping a lawn constantly covered with enduring green. It is impossible to make an enduring lawn by sowing seed of a single variety, which will only grow vigorously for a portion of the year. Kentucky Blue Grass, for instance, which is sometimes exclusively recommended for lawns, requires two years to form a close sward, and also loses color in hot weather.

**Our Special Mixtures for Special Purposes**—There is a Henderson Lawn Grass Mixture for any and every location.

**Shady Nook**—For use in shaded spots or under the trees.

**Tough Turf**—Low growing, deep rooted and fine leaved for use on grass tennis courts, croquet grounds, etc.

**Seaside**—For sandy conditions at the seashore. Will make a lawn where grasses do not usually grow.

**Nourish Your Lawn with Henderson’s Lawn Enricher and Top Dresser**

When applying it during the summer use half of the quantity given below and water in thoroughly with a hose. The use of “Henderson Lawn Enricher” entirely does away with the old practice of top dressing lawns with stable manure, so objectionable on account of unsightliness, disagreeable odors and often full of weed seeds.

**Quantity Required When Laying Down a New Lawn**

For a new lawn a 10-lb. package will go over an area of 200 square feet, or 1,000 to 1,500 lbs. per acre, use less for renovating an old lawn. Apply broadcast, preferably just before rain. In the summer use half of the quantity and water in with a hose.

PLANTING PLAN
for Special Collection of Perennial Plants

HARDY PERENNIALS belong to that group of the floral kingdom that is botanically classified as herbaceous plants. This class grows and flowers during the summer, then dies back to their roots during the winter and reappears the following spring. Once established they are a constant source of pleasure, presenting a variety of form and color throughout the season.

The twelve varieties named flower at different periods and combine a variety of form with richness of color. The letter prefixed to each variety is a key to the flowers shown in the illustration on this page.

Three plants of each planted according to the plan at the bottom of this page will make a garden ten feet long by four feet wide.
